

TAKE AIM

Struggling with repair and replacement budgeting for the coming years?

..... OR

Does your club's master plan lack details about golf course infrastructure?

If the answer to one or both of these questions is yes, your club could benefit from our proprietary **AIM Plan (Asset & Infrastructure Management Plan)**, a golf course facility analysis performed by Landscapes Unlimited.

The AIM Plan analysis was developed as a result of requests from club operators and owners looking to supplement their overall facility master plan with a better understanding of the lifecycle costs associated with one of the largest items on their balance sheet, the golf course!

The analysis covers the age, current condition, life expectancy, as well as, the risks and costs of repair vs replacement for all major infrastructure components of a golf course, including:

- Irrigation & Pumping Systems
- Trees & Plants
- Greens & Tees
- Water Sources
- Fairways
- Water Features
- Bunkers
- Cart Paths & Bridges
- Maintenance Complex
- Practice Areas
- Other Golf Course Structures
